

Digital Health Scan

The first step to maximising your impact as an organisation?
Taking control of your digital health.

In today's digitised world, digital tools are essential for organisations to streamline their processes for greater impact. To take advantage of technology's full potential, applications should work *for* rather than *against* you. This entails:

- consistent application usage between departments
- clear and unique application purposes
- access to reliable and high-quality technical support
- compliance with necessary standards

What do we offer?

We run a scan of your overall digital health to troubleshoot gaps in your IT landscape and create an action plan for improvement. Our scan will assess whether your 'house is in order,' checking for:

An agile, adaptable IT landscape with clearly structured applications

Service-oriented and cost-efficient IT supplier contracts

Quality of compliance with commonly applicable standards (GDPR, IATI, ISO)

Alignment of apps and primary processes
(e.g., Microsoft 365 with project management)

A single source of data across applications

Availability of clear strategic information via existing applications

Who is it for?

Those responsible for information technology and digital security:

- Operations Directors
- Finance Directors
- Chief Information Officers
- IT Coordinators
- Data Protection Officers

What does it cost?

€5.500

excl. VAT

Why Data4Development?

D4D bridges the gap between non-profit organisations and technology. We advocate for the power of technology for good, finding the best digital solutions to tackle each organisation's needs. Our expertise lies in aligning organisations' IT landscapes with their internal processes, aided by our extensive market knowledge of IT applications for project management, finance, CRM, data visualisation, and more.

Our track record

A scan of IT and information flows to assess the status quo and improvements needed to become more data-driven in organisational decision-making.

Preliminary IT scan leading to a new multi-annual IT Vision & transformation of the landscape.

Inventory of the IT organisation (compatibility & risks) resulting in an approach for improvement of the PME application.
